

Chapter V.—STATISTICS OF CITIES.

The term "city," as used in this report, covers all incorporated places (including New England towns, except in Connecticut). The practice of publishing census statistics of manufactures for individual cities was begun at the census of 1879. Prior to this census the state and the county were the only political divisions for which separate manufactures statistics were given in the census reports. Beginning with the census of 1879 certain cities have been selected at each census for separate presentation. For 1879 the statistics for 100 cities were shown separately; for 1889, those for 165 cities; for 1899, those for 1,340 cities; for 1904, those for 544 cities; for 1909, those for 593 cities; and for 1914, the year covered by the present census, those for 672 cities. The basis of selection has differed at each census. For 1879, there were 279 cities chosen for special canvass, although statistics were published only for the 100 largest cities; for 1889, statistics for 1,042 cities and towns were collected by special canvass, but statistics were published separately only for places of 20,000 inhabitants or over. For 1899 the selection was based on quite a different principle; 1,340 places were selected, in advance of the enumeration, to be canvassed by special agents, because it was thought that the work could be done to greater advantage by them than by the population enumerators, who collected the statistics of manufactures elsewhere at that census, and the statistics were published for all cities thus selected. Some of these 1,340 places had both a smaller population and less manufacturing business than some canvassed by the enumerators.

For the census of 1904 separate figures were published for all places of 8,000 inhabitants or over, and for 1909 and 1914 for all places of 10,000 or more. It has not been considered desirable to incur the heavy expense of segregating the schedules for smaller places in making the tabulations and publishing the results. To do so would be the less justifiable because in many cases the data for these places, even those for all industries combined, could not be published without virtually disclosing the operations of individual establishments. Moreover, in the case of many small places a large part of the manufacturing business, which to all intents and purposes belongs to them, is conducted in establishments located just outside the municipal boundaries. For such places data based only on establishments within the boundaries would be misleading, and, on the other hand, it would be impossible to determine precisely in a large number of cases what outside establishments should properly be considered as pertaining to a given city or village. This condition exists also in the case of cities of more than 10,000 inhabitants. Many manufacturers desirous of operating with all the advantages of an urban location, such as a plentiful supply of labor, good shipping facilities, and the like, purposely build their plants just outside the city limits in order to escape as many of its expenses and restrictions as possible. The corporate limits of some cities, moreover, have been extended so as to take in important manufacturing suburbs, while the boundaries of others have remained unchanged, although important manufacturing suburbs have developed. It often happens, also, that when city limits are established or extended the boundaries are run in such a way as to leave outside certain plants which would naturally be expected to come within the city limits. The real importance of a city as a manufacturing center, therefore, can not be ascertained, except by combining with the establishments actually located in the city all the neighboring manufacturing establishments identified or closely associated with its industrial development. The difficulty of determining in each case just which establishments should be so combined renders it impracticable to make such a compilation of the figures for all the cities. Consequently, the statistics for individual cities in the present report should not be taken as showing the true relative importance of each city as a manufacturing center in the broad sense. Many cities would rank very differently if the establishments in their suburbs were included.

The accompanying diagrams of Columbus, Ohio; Pueblo, Colo.; and Richmond, Va., illustrate the irregularities in the boundaries of the cities, and the fact that a number of manufacturing plants are located just outside the boundaries. In the case of Richmond, Va., the boundary as it existed prior to 1914 and also the boundary established at that time are shown.

CITY BOUNDARIES OF COLUMBUS, OHIO; PUEBLO, COLO.; AND RICHMOND, VA.,
 SHOWING LOCATION OF MANUFACTURING PLANTS OUTSIDE OF CITIES.

In the case of a great many of the smaller cities it was impossible to give separate statistics for some of the most important industries, because to do so would result in the direct or indirect disclosure of the operations of individual concerns. It often happens, therefore, that the most important industry in a city has to be grouped under the heading of "All other industries," and in many cases the industries for which statistics could be presented separately represent less than half of the total manufacturing interests of the city. For these reasons it was not deemed advisable to present statistics for individual industries in cities of less than 50,000 inhabitants.

A large part of the statistics regarding manufactures in individual cities are presented in the reports for the separate states, where the details for the more important cities of the state are shown. The principal items covered by the manufactures census are shown for 1914, 1909, and 1904, for all industries combined in each city of 10,000 or more inhabitants and for the leading individual industries in each city of 50,000 inhabitants or over, and more detailed statistics for the census of 1914 are likewise shown.

Summary for 130 leading cities: 1914.—Table 179 presents for the 130 cities which ranked highest in value of manufactured products, statistics in regard to population, number of establishments, average number of wage earners, value of products, value added by manufacture, and the rank in three of these items in 1914, together with the percentage of increase for average number of wage earners and value of products for the five-year period 1909-1914. The cities are arranged in order of rank as determined by value of products. As already indicated, the figures relate only to the manufacturing establishments actually situated within the boundaries of the respective cities. In the case of several of the cities establishments outside the boundary, which virtually constitute a part of the city's industrial interests, have a greater value of products than those within the city itself. The most notable instances of this character among the 130 cities are Pittsburgh and Boston, which would rank decidedly higher if the suburbs of each city were included with it than they do in the table, in which the statistics are confined to establishments within the city limits.

It should be noted, further, that a considerable number of cities not listed in the table, reported more wage earners or a greater value added by manufacture than some of the cities in the table, and there were 6 cities that had a product in excess of \$20,011,393 shown for Lancaster, Pa., which is the last city named on the table. In gross value of products the cities ranked as follows: Gary, Ind., forty-sixth; Duquesne, Pa., ninety-first; Cicero, Ill., ninety-fourth; Farrell, Pa., one hundred and eleventh; Monessen, Pa., one hundred and fifteenth, and Lackawanna, N. Y., one hundred and twenty-fourth. Statistics for these cities can not be shown without disclosing the operations of individual establishments. The ranking shown for each item represents correctly the standing of the cities named among all the cities of the country. The rank with respect to population is not shown; many cities not included in the table rank higher in population than some of those which are included.

New York decidedly outranks any other city in manufacturing, although in proportion to its population its manufacturing interests are relatively less important than in a considerable number of other cities. Nearly one-tenth of the total value of manufactured products for the United States in 1914 (9.5 per cent) was reported from New York City. Based upon the value of products, Chicago ranked second among cities in 1914, followed by Philadelphia, Detroit, St. Louis, Cleveland, Boston, Buffalo, Pittsburgh, Milwaukee, Baltimore, Cincinnati, and Newark, in the order named. Each of these 13 cities reported in 1914 manufactured products valued at more than \$200,000,000, and collectively produced 30.2 per cent of the total manufactured products of the country.

The rank of the cities of the country with respect to manufactures is in many cases decidedly different from their rank in population. Thus, in 1914, Boston ranks fifth among all the cities of the country in population, but seventh in value of manufactured products; Baltimore ranks seventh in population, but eleventh in value of manufactured products; and Los Angeles ranks twelfth in population, but twenty-sixth in value of products. Detroit, on the other hand, ranks fourth in value of manufactured products but ninth in population; Kansas City, Kans., by reason of the large slaughtering establishments there, ranks seventeenth in value of products, but sixty-seventh in population, and Akron, Ohio, twenty-first in manufactures and seventy-ninth in population.

VALUE OF MANUFACTURED PRODUCTS IN 1914 AND 1909 FOR 26 CITIES REPORTING PRODUCTS VALUED AT MORE THAN \$100,000,000
AT THE CENSUS OF MANUFACTURES IN 1914.

¹ Percentages are based on figures in Table 183 (p. 295). A minus sign (-) denotes decrease.² Less than one-tenth of 1 per cent.

Distribution according to size of communities.—It is of interest to know the extent to which the manufacturing enterprises of the country are located in the larger cities as compared with the smaller cities and rural districts. Some indication of this is given in Table 180, which distributes the total number of establishments, average number of wage-earners, value of products, and value added by manufacture reported in 1914, 1909, and 1899 by classes of places, the classes distinguished being cities of 100,000 inhabitants or over, cities of 25,000 to 100,000 inhabitants, cities of 10,000 to 25,000 inhabitants, and the remainder of the country, the latter including the smaller cities, towns, and other incorporated places and the rural districts. The aggregate population of each group in 1910 and 1900 and the estimated population for 1914 are also given. Statistics for 1904 are not given because there was no Federal census of population in 1905, so that it is impossible to determine precisely what cities belong to each group.

In considering this table it should be noted that each place is classed at each census according to its population at that census, so that the same community may be in one class in 1899, and in another class in 1909 or in 1914; and consequently the change in the totals for any given class of communities from 1899 to 1909 or to 1914 should not be taken as measuring the increase in manufacturing business in the same communities.

	1899	68.3	50.4	35.4	31.1	30.1

¹ The figures for population are for the censuses of 1900 and 1910 and are estimates for 1914.

² The population of 1910 is used for Gary, Ind., Farrell, Pa., and San Angelo, Tex.

In 1914 places of 10,000 inhabitants or over, although they included less than two-fifths of the total population of the country, contained more than one-half of the total number of manufacturing establishments. These establishments gave employment to two-thirds of the wage earners employed in manufactures (67.1 per cent), and reported more than two-thirds of the total value of products and of the value added by manufacture, the actual percentages being 69.6 and 71.7, respectively.

Character of ownership: 1914.—Table 181 (p. 287) presents for the 130 leading cities as measured by value of products, the number of manufacturing establishments owned by individuals, corporations, and other classes of ownership, respectively, the average number of wage earners and the value of products for each class.

The class designated "all others" is composed chiefly of firms. Included under corporations are a large number of close corporations which formerly were firms, but which have been incorporated. The cities are arranged according to total value of products, which in general conforms to the sequence for corporations. Among the exceptions to the rule are Baltimore, which shows a relatively large proportion of manufactures under "all others," and San Francisco, large proportions under "individuals" and "all others."

Wage earners employed by months and consumption of fuel: 1914.—Table 182 (p. 290) shows for the 130 leading cities the number of wage earners employed on the 15th day of each month, or the nearest representative day, in the manufacturing industries of each city, and the total cost of fuel, including rent of power, and the quantities of the different kinds of fuel reported for each city.

Wage earners.—The months in which the maximum and minimum number of wage earners were employed are indicated by bold-face type and italics, respectively, and the variance between them is shown by the percentage the latter is of the former. As a rule this variance is not large.

Fuel.—The "cost of fuel and rent of power" includes the cost of wood, charcoal, and other fuels, as well as that for which quantitative figures are given. A few cities stand out as consumers of more anthracite than bituminous coal, notably Newark, Bayonne, Paterson, and Passaic, N. J., while the Pacific coast cities use chiefly oil fuel.

Detailed statistics of cities.—Table 183 shows for each city having 10,000 inhabitants or over in the census year, and for which statistics can be shown without disclosing individual operations, some of the principal items covered by the manufactures censuses of 1914, 1909, 1904, and 1899. The selections for 1904 and 1899 are based upon the population census of 1900, those for 1909 upon the population census of 1910, and those for 1914 upon the estimated population for that year. The cities are arranged alphabetically under the name of the state in which they are located. For each state also the combined totals for all of the cities covered are presented.

Statistics are not shown separately for the following cities that had a population of 10,000 or over in 1914: Cicero, Ill., Gary, Ind., Virginia, Minn., Independence, Mo., West Orange, N. J., Lackawanna, N. Y., Coatesville, Dickson City, Duquesne, Farrell (formerly South Sharon), Monessen, North Braddock, Old Forge, and Steelton, Pa., and Newport News, Va. Such a large proportion of the industries of each of these places is represented by one ownership, that to publish the statistics would virtually disclose the operations of individual establishments.

Sex and age distribution of wage earners: 1914, 1909, and 1904.—The distribution of wage earners by age and of those 16 years of age and over by sex, is shown in Table 184 (p. 328) for the cities for which these statistics are available for the three censuses. The sex and age distribution for 1914 is based on the total number reported for all industries in each city as employed on December 15 or nearest representative day. For 1909 the distribution was made for each industry in the different cities and the calculated averages added to give the distribution of the average number for the city as a whole. For 1904 the average number distributed by sex and age was reported by each establishment. These averages were added to obtain the totals for each city. The changes in the methods followed at the different censuses were made for the purpose of reducing the amount of work involved in compiling these statistics without interfering with the comparability of the figures. This table does not carry the total for all cities because it could not be accommodated on the page. The following statement gives the total for the cities for which separate statistics were shown at the censuses of 1914, 1909, and 1904, respectively:

SEX AND AGE.	AVERAGE NUMBER OF WAGE EARNERS IN CITIES WITH A POPULATION OF 10,000 OR OVER.		
	1914	1909	1904
Total.....	4,722,217	4,307,374	3,463,564
16 years of age and over:			
Male.....	3,532,141	3,195,109	2,559,263
Female.....	1,117,206	1,013,737	810,666
Under 16 years of age.....	72,870	98,528	93,335

The percentage that each class represents of the total number of wage earners reported for 1914, 1909, and 1904, together with the per cent of increase for each class for the two five-year periods and for the decade 1904-1914 is given in Table 185 (p. 340), for cities with 50,000 inhabitants or more.

In 1914 New York City outranked all other cities in the country in the total number of wage earners in manufacturing industries and in the number of males and of females 16 years of age and over, but was third in the employment of children under the age of 16. Chicago ranked second in the total number of wage earners and in the number of males employed, but was third in respect to the number of women and second in that of children. Philadelphia held third place in the total number of wage earners and in the number of males employed, but was second in the number of women and first in the number of children. Baltimore ranked fourth in the employment of children.

Of the cities listed, Troy, N. Y., shows the largest proportion of women among the wage earners employed in 1914 (51.8 per cent), while Wilkes-Barre, Pa., shows the largest proportion of children (6.6 per cent). Males 16 years of age and over constituted more than four-fifths of the wage earners employed during 1914 in 58 of the cities in the table. Women 16 years of age and over formed more than one-third of the wage earners employed in 18 of the cities, chiefly centers of the textile industries—Fall River, Holyoke, Lawrence, Lowell, and New Bedford, in Massachusetts; Manchester, New Hampshire; Pawtucket, Rhode Island; New York City, Binghamton, Troy, Utica, and Yonkers, in New York; Passaic and Paterson, New Jersey; Allentown and Scranton, Pennsylvania; Baltimore, Maryland; and St. Joseph, Missouri. Children under 16 constituted 4 per cent or over of the wage earners employed in eight of the cities: Sacramento, Fall River, Allentown, Reading, Scranton, Wilkes-Barre, Pawtucket, and Charleston (S. C.). In 1909 there were 19 cities of this class.

Establishments classified according to size and power: 1914.—Table 186 (p. 346), presents statistics showing the size of establishments measured by value of products for cities of 10,000 inhabitants or more. It shows the number of establishments in each of four groups as classified according to value of products, and gives for each group the average number of wage earners employed during the year, the value of products, and value added by manufacture. This table does not show separate totals for establishments with a product valued at \$1,000,000 or over, because there are comparatively few cities for which data for establishments of this size can be shown separately without disclosing individual operations. There were 2,767 establishments of this class reported for all of the cities covered by this table; they gave employment to 1,862,911 wage earners, their products for 1914 were valued at \$8,581,548,000, and the value added by manufacture amounted to \$3,067,147,000. The statistics for the establishments of this class for the different industries and states are shown in Tables 194 and 195. Table 186 also shows the amount of primary power reported. The total electric power is also shown, including that generated in the establishment reporting. A combined total for steam and water power is given in this table, because there are comparatively few cities in which water power is used. The water power reported for all the cities amounted to 456,619 horsepower. The total of rented power includes 2,559,982 horsepower for electric motors, and 101,957 horsepower of other kinds. There are comparatively few cities in which power other than electric is rented.

Establishments classified by number of wage earners and prevailing hours of labor: 1914.—Table 187 (p. 370) gives for the 130 cities which ranked highest in value of products the number of establishments grouped according to the average number of wage earners employed and the average number of wage earners in each group of establishments. The table also shows the average number of wage earners classified according to the prevailing hours of labor per week in the establishment where they were employed.

ESTABLISHMENTS CLASSIFIED BY CHARACTER OF OWNERSHIP, AND AVERAGE NUMBER OF WAGE EARNERS AND VALUE OF PRODUCTS FOR EACH CLASS, FOR 130 LEADING CITIES: 1914.

VALUE OF MANUFACTURED PRODUCTS IN 1914 AND 1909 FOR FIFTY CITIES REPORTING PRODUCTS VALUED AT MORE THAN \$40,000,000 BUT NOT EXCEEDING \$100,000,000 AT THE CENSUS OF MANUFACTURES IN 1914.

COMPARATIVE SUMMARY FOR CITIES HAVING 10,000 INHABITANTS OR MORE, BY STATES: 1914, 1909, 1904, AND 1899.

[NOTE.—The figures for some cities do not agree with those published in 1909 and 1904, because it was necessary to revise the totals in order to include data only for those establishments located within the corporate limits of the city. Statistics of power are not available for the censuses of 1904 and 1899.]

Table 183 CITY.	Cen-sus year.	Num-ber of estab-lish-ments.	Wage earners (average num-ber).	Primary horse- power.	Capital.	Wages.	Cost of ma- terials.	Value of products.	Value added by manu- facture.

¹ All other cities include: Cicero, Ill., Gary, Ind., Virginia, Minn., Independence, Mo., West Orange, N. J., Lackawanna, N. Y., and Newport News, Va., in 1914; Cicero, Ill., Gary, Ind., Virginia, Minn., Great Falls, Mont., West Orange, N. J., Lackawanna, N. Y., Lakewood, Ohio, and Newport News, Va., in 1909; Great Falls, Mont., Orange and Perth Amboy, N. J., and Newport News, Va., in 1904 and 1899.

AVERAGE NUMBER OF WAGE EARNERS, BY SEX AND AGE, FOR CITIES AND TOWNS HAVING 10,000 INHABITANTS OR MORE, BY STATES: 1914, 1909, AND 1904.

(NOTE.—The figures for some cities do not agree with those published in 1909 and 1904, because it was necessary to revise the totals in order to include data only for those establishments located within the corporate limits of the city.)
